

Oleksandr Sekker

FRONT END DEVELOPER

Profile

I am a software engineer with almost two years of experience developing scalable and responsive web and mobile applications. I have a strong understanding of front-end development and have worked on various projects, such as an extension for online shopping, a mentorship app, and website onboarding for banks. My passion for technology and desire to learn new skills allows me to stay up-to-date with the latest developments in the React ecosystem.

Employment History

Front end developer, Onix-Systems, Remote

JULY 2021 – MARCH 2023

- Implemented multi-step authorization by updating user information in each step
- Added the ability to add and remove items from external websites and show them in the wish list in the extension. Also when hovering over items on an external website, make the ability to load similar items from other stores.
- Made project optimization by implementing eslint rules for company standards, improved test coverage, and developed reusable components for faster and more efficient development
- Implemented auto-fill for adders from Geo-location
- Added checking of noise when scanning a person's face using azure
- Implemented the ability to skip steps with photos and upload them to the server by keyboard hotkeys
- Collaborated with cross-functional teams to design and develop web applications using React and related technologies
- Implemented responsive designs and mobile-first layouts and implemented different animations
- Worked with REST API and integrated third-party services into applications
- Participated in agile development processes and followed best practices for collaborative development
